## **ASSINGMENT-2**

Build a python code, assume you get temperature and humidity values(generated with random function to a variable) and write a condition to continuously detected alarm in case of high temperature

## Code:

```
Import random

Temperature = random.randint(0,200) humidity

= random.randint(0,100)

print("The recorded temperature in Fahrenheit=
",temperature)

print("The recorded humidity in percentage= ",humidity)

if(temperature>110 or humidity>30):

    print("HIGH TEMPERATURE-Alarm ON")

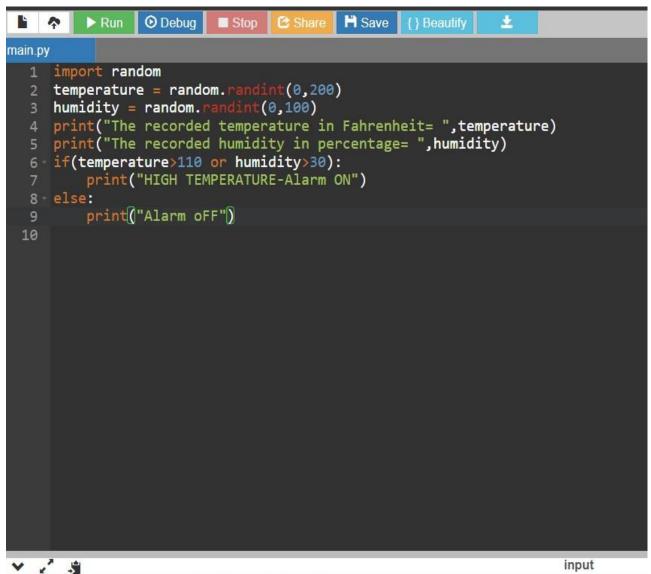

else:

    print("Alarm oFF")
```

## output: ALARM-OFF

```
▶ Run O Debug
                                              H Save
main.py
      1 import random
    temperature = random.randint(0,200)
humidity = random.randint(0,100)
print("The recorded temperature in Fahrenheit= ",temperature)
print("The recorded humidity in percentage= ",humidity)
if(temperature>110 or humidity>30):
print("HIGH TEMPERATURE-Alarm ON")
                  print("Alarm off")
The recorded temperature in Fahrenheit= 94
The recorded humidity in percentage= 16
Alarm ofF
```

## **ALARM-ON**

The recorded temperature in Fahrenheit= 35
The recorded humidity in percentage= 37
HIGH TEMPERATURE-Alarm ON
